

The **MB 200 BITUMEN SPRAYER** is intended for spraying bitumen emulsion onto an asphalt surface. It is used to repair or create new asphalt surfaces. The bitumen emulsion is sprayed with the help of a manually guided nozzle and continuously variable regulation of the spray cone. The bitumen emulsion is pumped and pre-heated from a barrel, which is mounted on a trolley together with the spraying motor. An air-cooled RATO R210 gasoline generator is used to power it. Cleaning the machine is simple: rinsing with the help of oil.

Standard equipment:

- Sprayer's own hydraulic power unit: RATO R210
- Clutch for idling
- Bitumen pump
- Forced heating with lue gas feedback
- Suction filter
- Spraying pole with spray nozzle
