RPM REFERENCE:	AM2026-0006
MANUFACTURER:	ZAGO
TYPE:	ECOGREEN
MODEL:	20SD
YEAR:	2019
HOURS:	1000
CONDITION:	GOOD WORKING ORDER
PRICE:	£25,000.00
LOCATION:	MID UK

Description

The Zago EcoGreen 20SD slow-speed shredder is a heavy-duty, low-RPM organic waste processor designed to shred, mulch, and mix biodegradable materials into a consistent, manageable output. It is commonly used in green-waste recycling, composting, and biomass preparation applications.

Key Characteristics

Slow-speed, high-torque operation: The low rotor speed delivers powerful shredding force while minimising noise, dust, and wear, making it ideal for tough or fibrous materials.

Shredder-mixer design: Uses multiple horizontal augers fitted with knives that both break down and blend material, producing a homogeneous end product rather than a simple size reduction.

Wide material capability: Suitable for processing branches, brushwood, roots, grass cuttings, green waste, pallets, cardboard, and compostable organic material.

Low nuisance operation: Quiet running and controlled material handling make it well-suited to urban sites and environmentally sensitive locations.

Flexible configurations: Available as trailed or static units, with options for diesel, electric, or PTO power, plus discharge conveyors and loading systems.

PTO driven from suitable tractor and versatile for multiple sites
